Warrnambool Roads Upgrade Design

Since 2015 Safe System Solutions Pty Ltd has been engaged to prepare functional designs for the Federal Black Spot Program and the Heavy Vehicle Freight Safety and Productivity Program projects awarded to Warrnambool City Council. These projects have included Black Spot locations (intersections and short lengths), Black Lengths and different heavy vehicle sites.

In developing each design, Safe System Solutions Pty Ltd considered designs against design vehicles, reviewing swept paths, developing signing and line marking layouts and noting and documenting risks in relation to the detailed design and construction of the proposed treatments.

Project: Warrnambool Roads Upgrade Design
